

PPR EF-Couplers

New generation

New state of the art manufacturing and product design with a fully embedded heating wire provides:

- Easy to clean fusion surface
- No media contact of the wire
- Uniform and efficient heat transfer in the fusion zone
- High welding quality
- Fast, simplified and safe installation
- Suitable for pipe repairs and modifications of piping systems
- Full tracability of the welding by using the also available EF fusion machines which also provide weld labels for each joint

This high quality couplers can be used to create durable and permanent welds for PPR, and PP-H piping installations. The welding technology is specially designed for joining PP pipes and fittings in areas where limited space is available or for installations in hard to reach areas.

The new PPR EF-couplers are available in standard and also in cleaned and double packed version (PP-PURE). Dimensions from OD 20mm up to OD 355 mm in SDR 11 are available. The new EF-welding equipment, specially designed and developed for full traceability, provides more reliable weld quality with high repeatability.
